

EMAILED March 9, evening

Please distribute to all MSB faculty, students and staff

Dear MSB faculty, students and staff:

As you know we have comprehensive efforts under way to address asbestos-related questions and concerns in the MSB building and are committed to communicating what we know as soon as we can.

Out of an abundance of caution, please be advised that a third party environmental consultant will conduct air sampling at locations across MSB. To begin they will collect air samples from the sixth floor of MSB starting Friday March 10 at 9:30am and continue on remaining floors Monday onwards until the building has been completed.. These sampling sessions take approx. 75 min. We're working with the university's leadership – operations and research, including Environmental Health & Safety – to ensure test results, methodologies and context is made available to all who would like to review.

As soon as we have that information we will share this with you.

Thanking you for your cooperation and concern.

Sincerely,

Richard Hegele

Vice Dean, Research & Innovation

Faculty of Medicine
